空间广义线性混合模型及其在预测流行病中的应用

Spatial Generalized Linear Mixed Models with Application to Prevalence Mapping

目录

Examples

1. radionuclide concentrations on Rongelap Island
2. childhood malaria in the gambia
3. Loa loa prevalence in Cameroon and surrounding areas

Introduction

Diggle *et al.* (2002)

- the effects of child level covariates (age and bed net use)
- village level covariates (the primary health care and greenness of surrounding vegetation)
- separate components for residual spatial
- non-spatial extrabinomial variation

$\mathbb{R}^n$

$$\log\{p_{ij}/(1-p_{ij})\} = \alpha + \beta' z_{ij} + U_i + S(x_i)$$

Intro

疟疾流行度与植被关系
